

QUALITY POLICY

ONBoard Solutions is a distributor of high tech production equipment and consumable products for manufacturing. Our major business activities are in the areas of clean room consumables and equipment; advanced materials technologies; and electronic assembly equipment and systems. Our key markets are in the medical, pharmaceutical, and electronics manufacturing industries.

In these areas we are committed to understanding and anticipating our customer's needs and to exceed their expectations with delivery of quality products and knowledgeable and professional service.

ISO9001:2008 provides a quality systems framework for our business and a sound foundation for the establishment of our business policies and practices including continual improvement of these processes. To support this, quality objectives are integrated into the business plans and are reviewed on a regular basis to ensure their continuing relevance.

Our management is committed to complying with both regulatory requirements and the requirements of ISO9001:2008 to enhance customer satisfaction and improve our business performance.

This policy will form the basis for compliance and for communicating our top level goals and objectives to our employees, customers and suppliers.
